

SHIV GAMIT

Cyber Security Undergraduate · Penetration Testing & OSINT

Ahmedabad, Gujarat | work.shiv01@gmail.com

linkedin.com/in/shiv-gamit-2a2148294 | github.com/UNKNOWN0410 | tryhackme.com/p/shivgamit989 | unknown0410.github.io

SUMMARY

Third-year B.Tech Cyber Security student focused on offensive security and OSINT. I build my own reconnaissance and network-security tools in Python and run a Kali Linux home lab on a Raspberry Pi 5. My team won 1st place in the cyber track of a 36-hour hackathon with a threat-intelligence platform. Looking for an internship in penetration testing, VAPT or OSINT analysis.

EDUCATION

Unitedworld Institute of Technology (UIT), Karnavati University

B.Tech in Computer Science & Engineering (Cyber Security) · currently in Semester V

2024 – 2028 (expected)

Gandhinagar, Gujarat

PROJECTS

OSINT Recon Framework · Python, SQLite, pytest

github.com/UNKNOWN0410/osint-recon

- Built a modular CLI for passive reconnaissance: subdomain enumeration from certificate-transparency logs (crt.sh), Wayback Machine URL harvesting, and Google dorking for exposed configs, backups, documents and admin panels.
- Wrote a risk-scoring engine that rates each finding from low to critical and explains why. Findings are deduplicated in SQLite and exported as per-domain Markdown reports. The tool installs with pip and has 15 pytest tests.

IRIS – Threat Intelligence Aggregator · Node.js, TypeScript, PostgreSQL, Redis, Docker

Hackathon – 1st Place

- Co-built in 36 hours with a team of six. IRIS takes an IoC (IP, domain, file hash or email), queries VirusTotal, AbuseIPDB, Shodan and IPInfo in parallel, and returns one normalized risk score and verdict (Malicious / Suspicious / Clean).
- Added MITRE ATT&CK technique mapping, city-level geolocation and a query audit trail. Keeps working if a feed fails.

Pi Sentinel – Home-Network Security Monitor · Python (stdlib), iptables, systemd

github.com/UNKNOWN0410/pi-sentinel

- Wrote a monitoring daemon that detects SSH brute-force attempts and automatically blocks the source IPs with iptables. It also flags port-scan-style connection floods and new listening services, and sends alerts to a log file and Telegram.
- Checks for breached passwords through the Have I Been Pwned k-anonymity API, so the full password hash never leaves the device.

PortScout – Network Port Scanner & Home Network Audit · Python

2026

- Built a multithreaded scanner (200 threads) with no external libraries. It does a ping sweep, a TCP connect scan and banner grabbing, flags high-risk services (Telnet, FTP, SMB, exposed databases) and exports JSON/CSV reports.
- Audited my own home network with PortScout and Nmap. Found FTP and Telnet open on the router, and MySQL and VNC exposed on a laptop.

Edge Object Detection on Raspberry Pi 5 · Python, YOLOv8, OpenCV, gphoto2

github.com/UNKNOWN0410/AI_project

- Connected a Canon DSLR to a Raspberry Pi 5 to run headless YOLOv8 object detection on the device. Also built a Discord bot hosted on the Pi that runs 24/7 and posts daily cybersecurity tips.

ACHIEVEMENTS & ACTIVITIES

- 1st Place, Cyber category** – 36-Hour Hackathon, UIT, Karnavati University (Team SKILL ISSUE, project IRIS).
- Live Hacking Event** (bug bounty) – iHUB DivyaSampark, IIT Roorkee × BugTrooper, attended remotely, Mar 2026.
- TryHackMe** – Top 35%, 11 rooms, focused on OSINT (Google Dorking, Geolocating Images, SoMeSINT, Cache Me Outside), offensive and defensive security, malware analysis and detection engineering.
- OSINT challenges** (by Sofia Santos) – geolocation, image and metadata analysis, SOCMINT, digital footprinting, verifying information across sources.
- Home lab** – Kali Linux on a Raspberry Pi 5 with key-only SSH and Tailscale remote access. I use it for recon practice, web testing and running Pi Sentinel.

TECHNICAL SKILLS

Offensive / Recon: Nmap, Burp Suite, OWASP ZAP, ffuf, Gobuster, Nikto, sqlmap, Metasploit, Hydra, Wireshark

OSINT: Google dorking, image geolocation, SOCMINT, certificate transparency, Wayback Machine, Shodan, VirusTotal, HIBP

Programming: Python, Bash, SQL, TypeScript / Node.js (basic), HTML/CSS

Systems & Tools: Kali Linux, Raspberry Pi, iptables, systemd, Docker, Git, SQLite, PostgreSQL

Concepts: TCP/IP, DNS, ports and services, MITRE ATT&CK, OWASP Top 10, threat intelligence, attack surface discovery
